PROFESSIONAL SUMMARY

AI-Augmented QA Engineer with nearly 2 years of experience testing microservice-based systems. Combine traditional QA rigor — requirement analysis, test case design, API verification with Postman/Mockoon, database checks (MySQL/PostgreSQL), and JMeter performance baselines — with a modern AI-augmented workflow leveraging Claude and GitHub Copilot to accelerate test authoring, log triage, and bug-report quality. Actively expanding automation skills into Playwright via AI-paired learning sessions with Claude Code. Multilingual: Vietnamese (native), Japanese (conversational, 4 years residence), English (professional).

CORE SKILLS

Testing Methodology Functional · Regression · Smoke · Sanity · UAT · Black Box · Exploratory · Boundary Value Analysis · Risk-Based Testing

API & Backend Testing REST API · Postman · Mockoon · JSON/XML validation · HTTP status code verification · Contract testing

Database Testing MySQL · PostgreSQL · SQL queries · Inner/Outer Joins · Data integrity · Data migration testing

Automation Selenium WebDriver · Playwright (TypeScript, in progress) · Page Object Model · Async test patterns

Performance Testing JMeter (basic baselines)

AI-Augmented Workflow Claude (Anthropic) · GitHub Copilot · Claude Code · Prompt engineering for QA tasks · AI-assisted log triage · Synthetic test data generation · Multi-language test asset translation

Process & Tools Agile · Scrum · SDLC · STLC · Bug Life Cycle · Sprint Planning · Jira · Confluence · TestRail · Git · Jenkins · Chrome DevTools

Soft Skills Cross-functional collaboration · Technical documentation · Defect reporting · Cross-cultural communication

PROFESSIONAL EXPERIENCE

HOPEE Co., Ltd. — Fresher / Junior QA Engineer

11/2024 – Present · Ho Chi Minh City, Vietnam

- Engaged in full-cycle testing for client projects, ensuring high-quality deliverables across microservice-based systems.
- Collaborated with cross-functional teams (developers, product owners, business analysts) to resolve complex issues and improve product stability.
- Refined automation skills and contributed to internal QA process improvements.
- **Pioneered an AI-augmented QA workflow** on the team — Claude for test case scaffolding from user stories, GitHub Copilot for Selenium script drafting, AI-powered log triage for failing CI pipelines — driving a noticeable productivity gain on routine authoring work.
- Authored 500+ test cases, reported 200+ defects across 2+ delivered projects.

HOPEE Co., Ltd. — Probationary QA Engineer

09/2024 – 11/2024 · Ho Chi Minh City, Vietnam

- Successfully transitioned from intern to probationary employee, taking on increased responsibilities.
- Executed regression testing plans and reported critical defects prior to release cycles.
- Demonstrated strong understanding of QA methodologies and tool proficiency.

HOPEE Co., Ltd. — QA Intern

06/2024 – 08/2024 · Ho Chi Minh City, Vietnam

- Gained hands-on experience in manual testing and familiarized with the company's tech stack.
- Assisted senior engineers in creating test cases and technical documentation.
- Participated in daily stand-ups and agile sprint ceremonies.

EDUCATION

FPT Aptech — Computer Education Diploma

07/2023 – 05/2024 · Ho Chi Minh City, Vietnam

Aptech Computer Education (India) in cooperation with FPT Corporation.

- Completed intensive coursework in software development and testing fundamentals.
- Developed foundational knowledge in programming logic, database management, and web technologies.
- Applied theoretical concepts through practical projects.

International Student — Japan

2019 – 2023

- Pursued academic studies while adapting to a new cultural environment.
- Developed strong cross-cultural communication skills and resilience.
- Gained proficiency in the Japanese language and Japanese work ethic.

LANGUAGES

- **Vietnamese** — Native

- **English** — Professional working proficiency
 - **Japanese** — Conversational (4 years residence in Japan)
-

AI-AUGMENTED WORKFLOW PATTERNS (SHOWCASE)

Concrete examples of how I integrate AI tooling into daily QA work — defensible in interviews:

1. **Test Case Scaffolding:** Given a user story + acceptance criteria, prompt Claude to draft Gherkin scenarios covering happy path, edge cases, boundary values, and negative paths. Always reviewed and augmented with domain context.
 2. **AI Log Triage:** Parse failing CI logs with Claude to extract root-cause hypotheses, cluster stack traces, and recommend Jira severity. Faster signal during sprint demos.
 3. **Synthetic Test Data:** Generate boundary value datasets and edge-case payloads for API testing — plugged directly into Postman / Mockoon test suites.
 4. **Multi-language Test Asset Sync:** Translate test cases and bug reports across EN / VI / JA using Claude with a custom QA glossary — useful for cross-region engineering teams.
 5. **AI-Paired Framework Mastery:** Self-directed learning of Selenium and Playwright through Claude Code pair-programming — scaffold Page Object Model, debug async test failures, refactor flaky tests. Faster ramp-up vs traditional tutorial-based learning.
-

CERTIFICATIONS (PLANNED)

- ISTQB Foundation Level — Target Q3 2026
